Guide to Node Migration from INT 3.0 to INT 4.0

As INT mainnet 4.0 approaching, here is a question from community: “What should I do to migrate my node to INT 4.0?” This is the guide for you.

Step1: Inform your supporters to withdraw votes on your node on INT 3.0, as well as your own votes, dropping you out of validators and the official node will take your place. (at this point the original server should be removed if there is a replacement server)

Step2: Collect your INT 3.0 tokens (the minimum quantity is 1 million) and swap it through swapping tool <https://wallet.intchain.io/titansmapping.html?lan=en>, and ask your supporters to swap their tokens as well.

Step3: Register for the INT 4.0 node after receiving the swapped token. Here is tutorial: <https://titansdocs.intchain.io/>

Step4: Vote for yourself with the extra votes, and announce the node information to your supporters, and call for voting until you are in the Top 25.
